ATV winch rope with hook

Product information

The Haklift ATV winch rope is suitable for ATV and other vehicles. The kit contains everything you need to replace an old wire rope or cable with a new one. The end of the rope has an attachment point for the winch drum. The winch rope has a breaking strength of 2200 kg, a thickness of 5 mm and a length of 15 mtr. The rope is made of HMPE (high-modulus polyethylene). The advantage of HMPE winch rope is that it does not get stuck on the drum as easily as the corresponding steel rope. HMPE rope also has no sharp-edged fibres and if it breaks, it does so much more cleanly than steel wire rope, thus avoiding the same kind of hazard.
